Coating Remover

Metallic Thinner

General-purpose thinner for model painting, featuring excellent solvent strength and moderate drying speed. Our optimized formula ensures superior color development and finish quality. Widely compatible with various types of lacquer paints.

Slow-drying thinner effectively prevents blushing during spraying. Its specially added eco-friendly slow-drying components extend the surface drying time to improve the self-leveling effect, result in a more smooth and glossy finish.

Powerful cleaning agent specially formulated to easily remove residual paint from your tools, greatly improving workflow efficiency during model painting. Its specially added deodorizing components effectively reduce unpleasant odors in the painting environment.

Coating remover specially formulated product designed for model repainting and refinishing. It features exceptionally gentle cleaning power that effectively dissolves dried paint films without damaging the model's substrate. Ideal for cleaning pre-painted models and removing mold release agents from cast resin parts.

Specially developed for EXTRA METAL series, this dedicated product effectively promotes uniform and even alignment of metal particles, enhances both the smoothness and metallic brilliance of the finished coating.

Redissolution

Retarder

Multi Primer

Developed for model builders who require low-odor solutions, friendly for odor-sensitive workspaces. This eco-friendly formula features reduced odor while highly effective removing paint residue.

When the solvent in your diluted paint has evaporated excessively, this product is able to restore viscous or completely dried model paint to its original properties.

Note: This product is recommend to use with lacquer paints from mainstream Japanese & Chinese brands, no guarantee for other purposes.

Effectively reduces brush marks generated during hand painting. It extends drying time, enhancing flow of paints and leveling for a smoother finish.

Note: Compatible with Jumpwind lacquer paints and some other acrylic paints.

Designed for priming model surfaces with poor adhesion. Its balanced hardness and surface texture minimize the attraction of dust and debris after painting. The excellent transparency prevents color shifts caused by the primer's own color or clarity. Suitable for common modeling materials including plastic, cast resin, metal and more.
